

Programmer

One programmer allows you to control all your Sensor Taps etc (individually)

Our hand held programmer allows quick and easy adjustment on site, for all your Robert Pearson Sensor Taps (and Robert Pearson Universal Programmable Sensors). It allows you to adjust sensing range, run-on timings, purge settings and more. Real-time data can be uploaded from the programmer via the USB port so you are able to see how many times each appliance has been operated (and purged), giving you accurate monitoring of water efficiency and appliance usage.

If you do not wish to purchase a programmer we can programme your sensor taps (and programmable universal sensors) to your specification prior to despatch, however, if you need to make changes on site this can only be done by using a programmer.

ALL DIMENSIONS IN MM

Receive:

One button to read current settings of your Sensor Tap (or Programmable Sensor).

Transmit:

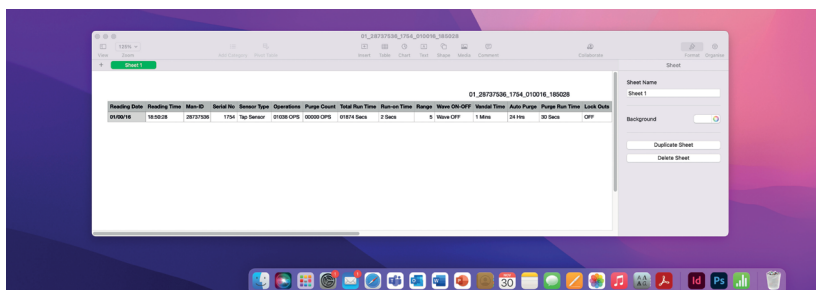

One button to transmit your chosen settings to your Sensor Tap (or Programmable Sensor).
