TAP SENSOR CONTROL KITS—TECHNICAL

Control Box

Standard tap control box with adjustable valve open time from 6 seconds to 20 seconds. *Call to discuss* for options if you require a longer valve open time.

Mains powered: You need to provide a 3 amp fused spur.

Battery powered

Control Box (Cont.)

Optional Purge Facility: Available on both mains- and battery-powered kits, "Purge Facility" allows you to set the tap to come on automatically if it has not been normally operated for more than a 24 hour period (to help prevent dead legs).

Optional Lock-Out Facility: Available on mains-powered kits only, "Lock-Out Facility" ensures the tap will stop working if it has been operated more than 4 times in 15 minutes (will automatically re-set itself after 15 minutes).

You can also set the system so you can activate the sensor once to turn the water on and then activate the sensor again to override the pre-set time and turn the water off immediately. It is possible to use 1 No. sensor to control 2 No. solenoid valves using a single control box.

Sensor / Touchpad Switch

Anti-Ligature & Vandal Resistant: Ideal for custodial/mental health/public & commercial applications.

Ensure no bright lights (or reflected lights) are shining directly into sensor. If fitting sensor/touchpad through a thick (e.g. brick) wall, we can supply extension threads. Standard pre-wired sensor c/w 3m cable. Longer cable lengths available. *Call to discuss.*

Simply put your hand within 50mm of the sensor to turn water on. Turns water off automatically after use. If you require a longer sensing range (e.g. set to the length of the tap spout) or would like the sensor mounted directly below the tap spout you can choose our brushed stainless steel Programmable Tap Sensors with plain, blue or red inserts (to denote water temperature).
