

Mains Programmable Individual Urinal Sensor

You will need to purchase a hand held programmer to adjust the settings yourself on site

The Panel Mounted Programmable Individual Urinal Sensor is standard in brushed stainless steel. Adjustable settings include; run-on time, sensor range, purge and more. Fit the sensor in the panel directly above the urinal bowl, so that the sensor can detect a person standing in front of it. The sensor needs to constantly detect someone at the urinal for at least 10 seconds before going into flush mode (to prevent someone walking down the range of urinals and setting them all off accidentally!). The flush will occur within a few seconds of the person walking away from the urinal.

Programmable Individual Urinal Sensor Kit Order Code:

Water pressure: The standard solenoid valve is rated for water pressures of 0.75 Bar – 10 Bar, although we suggest a maximum pressure of 5 Bar. We also offer optional low pressure valves.

Electrical requirements: Each mains-powered kit requires a 3 amp protected fused spur. If specified at time of order we can arrange the kits so you can run up to 3 showers from a single 6v Power Supply Unit. You will need an additional 'Y' connector for our 2 tap kits, and 2 additional 'Y' Connectors and an extension 'D'-lead for our 3 tap kits.
